Programming Languages

- C#
- HLSL (High-Level Shader Language)
- Javascript
- HTML 5
- CSS
- XML

Frameworks

.Net Core 5 - .Net Core 10
.Net MAUI
.Net Blazor
Box2D Version 3.0+
ReactJS
Angular

Skill Highlights

- Multi-threaded 2D Physics – Unity C# Job API with Box2D v3.1
- Metroidvania Toolkit Unity Package – Low Level Physics 2D API
- Top Down ARPG Unity Package – Low Level Physics 2D API
- Core Game System Architecture Design
- Technical Effects – Shaders, VFX effects, and Post Processing
- Project and Task Management – Perforce Helix Plan (previously named Hansoft), Codecks, and Asana
- Version Control – GitLab, GitHub and Perforce Helix Core
- Unity Editor Tool Development – UI Toolkit and IMGUI
- Manual Project Documentation – GitBook
- API Documentation Tooling – DocFX

Experience

Team Agenda – Sony PlayStation Partner – Core Game Systems (Half Year Contract): (7 team members)

June 5th 2026 – January 3rd 2026

- Create a Dialogue Graph Editor for Unity that can control game logic in and out of cut scenes. Created using Unity's Graph Toolkit.
- Implement a localization tool allowing external partners to take an xml or csv file with the games dialogue and text to translate and have the team use the translated text.
- Link Unity's Localization package and an external tool Sony uses to help translate partner studios text for multiple countries during localization.
- Sony Localization Tool is called LAMS – GDC has the presentation in their vault.
- Updated entire games render pipeline from BIRP to 2D URP.

Network Developer (Contract):

June 5th 2026 – January 3rd 2026

- Developing a Distributed Authority topology to create a low cost networking environment for a client hosted ARPG.
- Create a player connection system that syncs physics, animations, and player interactions.

Immortal Chronicles 2D Metroidvania Lead Developer (Shatter Fantasy):

January 5th 2025 – Current Side Project

- Implemented a custom physics system to support multithreading and burst compiler in Unity. Based on Box2D version 3.1
- Create a fully custom character controller for enemies, npc, and the player.
- Build data editor tools to quickly create new enemies, items, and dialogue.
- Create a Metroidvania style room spawn system that controls spawning and events for each room the player can enter.
- Make an A* Grid system to allow for non-grounded path finding.

- Dedicated save and load system with AES file encryption support.
- Researching Shaders and VFX graph for future environmental visual effects like water freezing and plants burning that uses the low level physics 2D API for environmental interactions.

Open Source Unity Tool Developer Shatter Fantasy – 01/5/2024 – Current

- Create Unity tools for the community to help improve game development experience
- Develop the SF Metroidvania package designed to make Metroidvania games easier to develop.
- Develop the SF Core package to help make UI systems based on UI Toolkit easier to design, code, and implement.
- Implement a set of general use utility functions to help certain development operations in Unity.

Game Systems Developer Mizzou University's Adroit Studio (32 members)

– 01/2023 to 05/2024

[Mission HydroSci 2.0 | Adroit Studios Gaming Lab](#)

- Design and implement core systems for MHS 2.0 Hydrosci project.
- System included UI, character physics, camera managers, and scene control tools to connect with a dialogue system.
- Use Perforce to create stable builds for testing at the QA department.
- Debug bug reports and analysis performance issues for different platforms and devices for WebGL builds of the project.

Education

Bachelor of Science: Game Programming, University of Advancing Technology
2016 — 2017
